In 2015, 193 countries around the world agreed to 17 Sustainable Development Goals, which chart a course toward a better, more prosperous future for the planet and all its people. As part of the 2030 Agenda for Sustainable Development, the aim of these goals is for countries to mobilize efforts to end all forms of poverty, fight inequalities, and tackle climate change by the year 2030.

For each of the goals, consider:

- How are forests and forest products connected to this goal?
- In what ways do forests and forest products contribute to achieving this goal?
- In what ways does this goal help to ensure forest sustainability?
- What baseline data or monitoring is required to determine progress toward this goal?
- What green jobs can help countries work toward this goal?
